

PGEO-6050 [SPRING 2017]

Laboratory 08 – [20 Points]

Dr. Henrique Momm

1 Working with RASTERS

PART I (Created by HMOMM)

Write a PYTHON script to locate the most appropriate location for a winder cabin. The requirements are: (i) flat terrain (slope <20) and (ii) facing south. Use the elevation dataset provided for the in-class exercise of lecture 15.

Submission

Please submit your script files to D2L.
