PGEO6050 – Programming for Geospatial Applications [SP17]

Working with Cursors – 30 points

Dr. Henrique Momm

1. Retrieving information from FC/FL table

Using cursor programming option within **arcpy** Python module, write a Python program to read the airport names from the "airports.shp" file and write them to a comma separated file.

2. Updating information within FC/FL table

Using cursor programming option within **arcpy** Python module, write a Python program to populate the STATE field with the word AK.

6. Notes

    a) This assignment should be uploaded to D2L.
